

Swan-neck forks

Swan-neck does the trick

There are goods that could be damaged by the inner heel radius of a standard fork (i.e. wood plates, sensitive pallets etc.). **The solution is swan-neck forks:** The inner heel radius will be relocated backwards. Thus, the nominal length of the fork can be completely used resulting in an increase of safety and efficiency.

- ▶ Protection of goods: No damages by the inner heel radius
- ▶ Higher safety: Blade length can be completely used
- ▶ No protruding goods
- ▶ More efficiency: Fast and smooth loading
